Object: Lock series x1R model 69H Panic4RM declaration

Dear Sirs,

We hereby declare that the security performances of the electromechanically locks series x1R mod. 69H are exactly the same of the electromechanically locks series x1R mod. 699 (Grade 7 according to EN14846 / EN12209).

The locks series x1R 69H Panic4RM are derived from x1R 699 but are designed to be a part of an EN1125 kit in cooperation with the panic bar called Pro4RM

The only difference between the two locks is that in the 69H there is a plastic ring around the latch, the scope of the ring is to reduce the friction in the EN1125 test; release force ≤ 220 N with the leaf loaded 1000 N.

- No differences in latch mechanism
- No differences in deadbolt design and deadbolt mechanism
- No differences in electrical / electronic components
- No differences in software / communication system

If you need some clarification, feel free to contact us.

Kind regards

ISEO SERRATURE S.p.A.
